

Colours

DAMPA offers a complete range of standard colours available for all ceiling products. The colour spectrum has been chosen to achieve the widest possible usage of coloured ceilings.

The majority of our customers have asked for variations on a white colour base and this reflects a broad representation of the light tones amongst the colours. The standard colour is DAMPA pure white 4747-2 corresponding to RAL 9010. The mid tones offer the possibility of combining with like colours or in complete contrast, there are also several high tone colours to choose from.

Please contact DAMPA to get more information about surfaces, for example printed surfaces, anodising, structure lacquer or other effects.

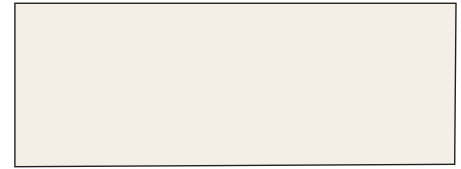

DAMPA colours are available in the same gloss level as the standard white semi matt finish. This is defined by a -2 after the colour number and signifies a gloss level of 10.

The selected colours are production assured, and are therefore quality guaranteed based on well tried processes where the raw material is cleaned, electrostatically painted and stove-enamelled. However, there will always be slight colour variations between different batch supplies.

Painted laboratory samples of any colour are available from DAMPA on request.

i 4747-2 DAMPA Pure White (RAL 9010)

i 4578-2 Light Grey (RAL 7035)

i 4728-2 Signal White (RAL 9003)
